# Attention Prowler Owners

There is now a replacement Litens OAD (Overrunning Alternator Decoupler) available in the aftermarket for the 2000 – 2002 model year Prowlers with the 3.5L engine and the 130 Amp Mitsubishi alternator. The replacement OAD is considered an upgraded pulley in both performance as well as durability. It is slightly smaller compared to the original OAD, which is now obsolete and will therefore give a higher amount of alternator output at idle. The slightly smaller OAD pulley does not require a belt length change as the lock center tensioning system will accommodate the new OAD. The Mopar part number of the old OAD is A252C508BC and is now being replaced in the aftermarket by Tendeco part number 920782.
