

TECH TIPS

Dixie Part Numbers:	A-1722	A-1723	A-1724	A-1725
	A-1726	A-1727	101-11101	101-11102
	101-11103	101-11104	101-11201	101-11202
	3501-1111	3501-1121		

Applications: Various Industrial and Agricultural Equipment

Condition: A technician testing the above part numbers may inadvertently connect the alternator incorrectly when testing the above part numbers.

Cause: The regulator plug connector on the above part numbers has the same terminal designations as many GM automotive applications. However, most automotive applications will operate with no S or sense lead connected. The above part numbers will not work with out a sense lead connected.

Correction: Always connect a sense wire (battery positive) to the S terminal when testing an alternator from the above list of part numbers.
