

ERA Tech Seminar Visits Boston

By Dan Smith

The Electrical Rebuilders Association (ERA) Technical Education Series presented by Joe Davis stopped by Boston Auto Electric on Sept 9 and 10 and was met with 26 attendees on Friday night and 41 for the Saturday session.

Davis once again put on a great show full of valuable information and rebuilding tips. The content of the Friday night program was well received by most with many positive comments from rebuilders who walked away with a much better understanding of how alternators, generators and starters work.

The new unit information and rebuilding tips from the Saturday morn-

ing session will more than pay for the cost of attendance in future time and money savings. Hands-on demonstrations of new parts and rebuilding processes gave the audience an opportunity to see and identify the units they will be rebuilding in the near future.

Alan Melton was our featured guest speaker on Saturday afternoon. Topics ranged from new, fast slew rate regulators to "outside the box" ways to improve business in a rebuilding shop. Many rebuilders shared their tips and problem unit fixes.

The ERA wishes to offer its thanks to Boston Auto Electric for hosting the seminar and providing a great lunch. All of their crew was on hand to meet the rebuilders, helping to put names to faces for everyone.

Dan Smith is sales manager, Boston Auto Electric, Inc., Boston, Mass.
