MAGNETO SERVICE INFORMATION

TYPE W AND X IMPULSE COUPLING PARTS

This letter supplements our Bulletin FM69 dated January 30, 1940 with regard to discontinuing types W and X impulse couplings in favor of the type U coupling. The types W and X couplings have been obsolete for a number of years. These two couplings were used mostly on the types R2 and RV magnetos.

Infrequently we receive orders for service parts for the types W and X couplings but the total orders received, which are necessarily run in small quantities, makes the price prohibitive. Therefore, effective at once, we will discontinue furnishing parts for these two couplings except the A-2565 spring and the A-2570 nut. When other parts of these couplings are involved for service, a complete type U coupling should be sold and ordered as a replacement.

END CAP COVERS AND GASKETS FOR TYPES FM-R AND FM-OR MAGNETOS

Bulletin FM156, Table III, outlines the change in design in the distributor compartment cover from the two screw type to the four screw type.

Service Stations should carry some of each type of parts in stock, since these parts are not interchangeable and further, when ordering, should specify which type is wanted. This especially pertains to the following items:

a. 800 - Distributor Compartment Cover
b. 2430 - Distributor End Cap
c. 682 - End Cap Cover Gasket
Screws and Lockwashers

IDENTIFICATION OF FM-X AND FM-XC MAGNETO ROTORS AND FRAMES - CHANGE OF COILS

To assist in identification of magnetic rotors and frames for the above magnetos, the cartons containing these service parts will be stamped with the letters X or XC in addition to the regular part identification.

NOTE: The first type FM-XC1B7 and type FM-XC1B7D magnetos built for Wisconsin Motor Corporation engines were equipped with the M2477 coil. Later developments indicate that the BX2477 coil will give better performance; therefore, when either of the above magnetos are being serviced, please substitute the BX2477 coil gratis, making the usual claim report.
